研究背景 (Background)

ATP citrate lyase is the primary enzyme responsible for the synthesis of cytosolic acetyl-CoA in many tissues. The enzyme is a tetramer (relative molecular weight approximately 440,000) of apparently identical subunits. It catalyzes the formation of acetyl-CoA and oxaloacetate from citrate and CoA with a concomitant hydrolysis of ATP to ADP and phosphate. The product,

acetyl-CoA, serves several important biosynthetic pathways, including lipogenesis and cholesterologenesis.

研究领域 (Research Area)
