研究背景 (Background)

In conjunction with other heat shock proteins, this protein stabilizes existing proteins against aggregation and mediates the folding of newly translated proteins in the cytosol and in organelles. It is also involved in the ubiquitin-proteasome pathway through interaction with the AU-rich element RNA-binding protein 1. The gene is located in the major histocompatibility

complex class III region, in a cluster with two closely related genes which encode similar proteins.

研究领域 (Research Area)
