研究背景 (Background)

This gene encodes a member of the type I (acidic) cytokeratin family, which belongs to the superfamily of intermediate

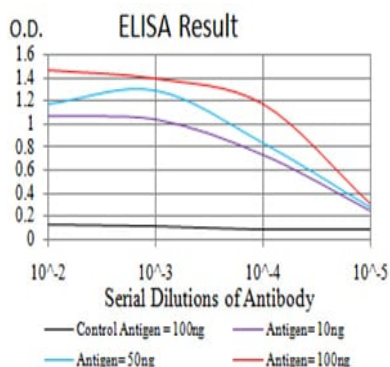

产品名称: KRT10 Mouse Monoclonal Antibody
产品货号: AMM81789

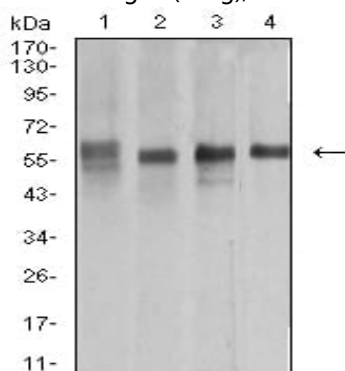

filament (IF) proteins. Keratins are heteropolymeric structural proteins which form the intermediate filament. These filaments, along with actin microfilaments and microtubules, compose the cytoskeleton of epithelial cells. Mutations in this gene are associated with epidermolytic hyperkeratosis. This gene is located within a cluster of keratin family members on chromosome 17q21.
