研究背景 (Background)

The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor has been shown to activate

产品名称: OX40 Mouse Monoclonal Antibody

NF-kappaB through its interaction with adaptor proteins TRAF2 and TRAF5. Knockout studies in mice suggested that this receptor promotes the expression of apoptosis inhibitors BCL2 and BCL2L1/BCL2-XL, and thus suppresses apoptosis. The knockout studies also suggested the roles of this receptor in CD4+ T cell response, as well as in T cell-dependent B cell proliferation and differentiation.
