研究背景 (Background)

The protein encoded by this gene belongs to a group of apparently inactive homologs of ubiquitin-conjugating enzymes.

产品名称: TSG101 Mouse Monoclonal Antibody
产品货号: AMM82778

The gene product contains a coiled-coil domain that interacts with stathmin, a cytosolic phosphoprotein implicated in tumorigenesis. The protein may play a role in cell growth and differentiation and act as a negative growth regulator. In vitro steady-state expression of this tumor susceptibility gene appears to be important for maintenance of genomic stability and cell cycle regulation. Mutations and alternative splicing in this gene occur in high frequency in breast cancer and suggest that defects occur during breast cancer tumorigenesis and/or progression.
