研究背景 (Background)

Catalytic subunit of a constitutively active serine/threonine-protein kinase complex that phosphorylates a large number of substrates containing acidic residues C-terminal to the phosphorylated serine or threonine. Regulates numerous cellular processes, such as cell cycle progression, apoptosis and transcription, as well as viral infection. May act as a regulatory node

which integrates and coordinates numerous signals leading to an appropriate cellular response.

研究领域 (Research Area)

Cell Biology

注意事项 (Note)

For research use only.
