研究背景 (Background)

This protein recognizes C4b and C3b fragments that condense with cell-surface hydroxyl or amino groups when nascent C4b and C3b are locally generated during C4 and c3 activation. Interaction of daf with cell-associated C4b and C3b polypeptides interferes with their ability to catalyze the conversion of C2 and factor B to enzymatically active C2a and Bb and thereby

prevents the formation of C4b2a and C3bBb, the amplification convertases of the complement cascade.

研究领域 (Research Area)
