研究背景 (Background)

Represses a number of genes involved in the response to DNA damage (SOS response), including recA and lexA. Binds to the 16 bp palindromic sequence 5'-CTGTATATATACAG-3'. In the presence of single-stranded DNA, RecA interacts with LexA causing an autocatalytic cleavage which disrupts the DNA-binding part of LexA, leading to derepression of the SOS regulon

and eventually DNA repair. Implicated in hydroxy radical-mediated cell death induced by hydroxyurea treatment.

研究领域 (Research Area)

Microbiology
