研究背景 (Background)

ATF4, an activating transcription factor/cAMP-response element-binding protein family member, functions in the PERK and eIF2 α ER stress responsive pathway. ER stress represses the translation of the majority of mRNAs, but selectively stimulates the

translation of certain mRNAs including that of ATF-4. Induced expression of ATF-4 increases the expression of genes critical for the recovery from ER stress.

研究领域 (Research Area)

Epigenetics and Nuclear Signaling
