研究背景 (Background)

The protein encoded by this gene is a member of the FPS/FES family of non-transmembrane receptor tyrosine kinases. It regulates cell-cell adhesion and mediates signaling from the cell surface to the cytoskeleton via growth factor receptors. Alternative splicing results in multiple transcript variants. A related pseudogene has been identified on chromosome X. [provided by RefSeq, Apr 2015], catalytic activity: $\text{ATP} + \text{a [protein]-L-tyrosine} = \text{ADP} + \text{a [protein]-L-tyrosine phosphate}$, function: Tyrosine kinase of the non-receptor type. Probably performs an important function, perhaps in regulatory processes such as cell cycle control, similarity: Belongs to the protein kinase superfamily. Tyr protein kinase family. Fes/fps subfamily, similarity: Contains 1 FCH domain, similarity: Contains 1 protein kinase domain, similarity: Contains 1 SH2 domain, subcellular location: Associated with the chromatin, tissue specificity: Expressed in a variety of lymphoid cell lines,
