

### 产品概述 (Summary)

产品名称 (Production Name) E2F-1 (Acetyl-Lys120) Rabbit Polyclonal Antibody

描述 (Description) Rabbit polyclonal Antibody

宿主 (Host) Rabbit 应用 (Application) WB,ELISA

种属反应性 (Reactivity) Human, Mouse, Rat

## 产品性能 (Performance)

偶联物 (Conjugation)Unconjugated修饰 (Modification)Acetylated

同种型 (Isotype) IgG

克隆 (Clonality) Polyclonal 形式 (Form) Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid 存放说明 (Storage)

freeze/thaw cycles.

PBS, pH 7.4, containing 0.02% New type preservative N as Preservative and 储存溶液 (Buffer)

50% Glycerol.

纯化方式 (Purification) Affinity purification

# 免疫原信息 (Immunogen)

基因名 (Gene Name) E2F1

**別名 (Alternative Names)** E2F1 RBBP3 基因 ID (Gene ID) 1869.0

**蛋白ID (SwissProt ID)** Q01094.Synthesized acetyl-peptide from human protein at AA range: 100-170

# 产品应用 (Application)

**稀释比 (Dilution Ratio)** WB 1:500-1:10000,ELISA 1:5000-1:20000

蛋白分子量 (Molecular Weight) 60kDa

# 研究背景 (Background)

The protein encoded by this gene is a member of the E2F family of transcription factors. The E2F family plays a crucial role

产品货号: APRab06184

in the control of cell cycle and action of tumor suppressor proteins and is also a target of the transforming proteins of small DNA tumor viruses. The E2F proteins contain several evolutionally conserved domains found in most members of the family. These domains include a DNA binding domain, a dimerization domain which determines interaction with the differentiation regulated transcription factor proteins (DP), a transactivation domain enriched in acidic amino acids, and a tumor suppressor protein association domain which is embedded within the transactivation domain. This protein and another 2 members, E2F2 and E2F3, have an additional cyclin binding domain. This protein binds preferentially to retinoblastoma protein pRB in a cell-cycle dependent manner. It can mediafunction:Transcription activator that binds DNA cooperatively with dp proteins through the E2 recognition site, 5'-TTTC[CG]CGC-3' found in the promoter region of a number of genes whose products are involved in cell cycle regulation or in DNA replication. The DRTF1/E2F complex functions in the control of cell-cycle progression from G1 to S phase. E2F-1 binds preferentially RB1 protein, in a cell-cycle dependent manner. It can mediate both cell proliferation and p53-dependent apoptosis, PTM: Phosphorylated by CDK2 and cyclin A-CDK2 in the S-phase., similarity: Belongs to the E2F/DP family., subunit: Component of the DRTF1/E2F transcription factor complex. Forms heterodimers with DP family members. The E2F-1 complex binds specifically hypophosphorylated retinoblastoma protein RB1. During the cell cycle, RB1 becomes phosphorylated in mid-to-late G1 phase, detaches from the DRTF1/E2F complex, rendering E2F transcriptionally active. Viral oncoproteins, notably E1A, T-antigen and HPV E7, are capable of sequestering RB protein, thus releasing the active complex. Interacts with TRRAP, which probably mediates its interaction with histone acetyltransferase complexes, leading to transcription activation. Binds TOPBP1 and EAPP. Interacts with ARID3A.,

#### 研究领域(Research Area)

Cell Cycle G1S;Cell Cycle G2M DNA;Pathways in cancer;Pancreatic cancer;Glioma;Prostate cancer;Melanoma;Bladder cancer;Chronic myeloid leukemia; Small cell lung cancer; Non-small cell lung cancer;

#### 图片 (Image Data)

Western Blot analysis of MOUSE-BRIAN cells using Antibody diluted at 2000. Secondary antibody was diluted at 1:20000

## 注意事项 (Note)

For research use only.
