研究背景 (Background)

This gene encodes a protein that belongs to the High Mobility Group-box superfamily. The encoded non-histone, nuclear DNA-binding protein regulates transcription, and is involved in organization of DNA. This protein plays a role in several cellular

processes, including inflammation, cell differentiation and tumor cell migration. Multiple pseudogenes of this gene have been identified. Alternative splicing results in multiple transcript variants that encode the same protein. [provided by RefSeq, Sep 2015],function: Binds preferentially single-stranded DNA and unwinds double stranded DNA.,similarity: Belongs to the HMGB family.,similarity: Contains 2 HMG box DNA-binding domains.,

研究领域 (Research Area)

Base excision repair;

注意事项 (Note)
