研究背景 (Background)

The protein encoded by this gene binds phosphoinositides and promotes the formation of planar or curved membrane structures. The encoded protein is found in RAB13-positive vesicles and at intercellular contacts with the plasma membrane. [provided by RefSeq, Dec 2012],domain:The IMD domain is predicted to have a helical structure. It may induce actin bundling and filopodia formation.,function:May function as an adapter protein .,similarity:Contains 1 IMD (IRSp53/MIM homology) domain.,similarity:Contains 1 SH3 domain.,
