

产品名称: CD35 Rabbit Polyclonal Antibody

产品货号: APRab08376

产品概述 (Summary)

描述(Description)	Rabbit polyclonal Antibody
宿主(Host)	Rabbit
应用(Application)	WB,ELISA
种属反应(Reactivity)	Human,Rat,Mouse
偶联物(Conjugation)	Unconjugated
修饰(Modification)	Unmodified
同种型(Isotype)	IgG
克隆(Clonality)	Polyclonal
剂型(Form)	Liquid
保存条件(Storage)	Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw cycles.
储存溶液(Buffer)	Liquid in PBS containing 50% glycerol, 0.5% protective protein and 0.02% New type preservative N.
纯化 (Purification)	Affinity purification

产品应用(Application)

稀释比(Dilution Ratio)	WB 1:500-1:2000,ELISA 1:10000-1:20000
分子量(Molecular Weight)	220kDa

抗原信息(Antigen Information)

基因名(Gene Name)	
别名(Alternative Names)	complement component (3b/4b) receptor 1/2 (Knops blood group)
基因 ID(Gene ID)	1378.0
SwissProt ID	P17927/Q2VPA4
免疫原(Immunogen)	The antiserum was produced against synthesized peptide derived from the Internal region of human CR1/CR1L. AA range:300-350 & 740-790

研究背景 (Background)

This gene is a member of the receptors of complement activation (RCA) family and is located in the 'cluster RCA' region of chromosome 1. The gene encodes a monomeric single-pass type I membrane glycoprotein found on erythrocytes, leukocytes,

glomerular podocytes, and splenic follicular dendritic cells. The Knops blood group system is a system of antigens located on this protein. The protein mediates cellular binding to particles and immune complexes that have activated complement. Decreases in expression of this protein and/or mutations in its gene have been associated with gallbladder carcinomas, mesangiocapillary glomerulonephritis, systemic lupus erythematosus and sarcoidosis. Mutations in this gene have also been associated with a reduction in Plasmodium falciparum rosetting, conferring protection against severe malaria. Alternate allele-specific splice variants function: Mediates cellular binding of particles and immune complexes that have activated complement. miscellaneous: This is the sequence of the F allotype of CR1. online information: Blood group antigen gene mutation database. polymorphism: CR1 contains a system of antigens called the Knops blood group system. Polymorphisms within this system are involved in malarial rosetting, a process associated with cerebral malaria, the major cause of mortality in Plasmodium falciparum malaria. Common Knops system antigens include McCoy (McC) and Sl(a)/Vil (Kn4, or Swain-Langley; Vil or Villien). Sl(a-) phenotype is more common in persons of African descent and may protect against fatal malaria. similarity: Belongs to the receptors of complement activation (RCA) family. similarity: Contains 30 Sushi (CCP/SCR) domains. subunit: Monomer. tissue specificity: Present on erythrocytes, leukocytes, glomerular podocytes, and splenic follicular dendritic cells.

研究领域 (Research Area)

Complement and coagulation cascades; Hematopoietic cell lineage;

注意事项 (Note)

For research use only.

图片 (Image Data)

Western Blot analysis of A549 3T3 mouse-liver mouse-brain cells using CD35 Polyclonal Antibody diluted at 1:800. Secondary antibody was diluted at 1:20000
