研究背景 (Background)

This gene encodes a protein that is upregulated in response to various cytokines. The encoded protein may play a role in cell cycle progression. A translocation between this gene and the myeloid/lymphoid leukemia gene, resulting in expression of a chimeric protein, has been associated with acute myelomonocytic leukemia. Pseudogenes exist on chromosomes 7 and 8. Alternatively spliced transcript variants have been described. [provided by RefSeq, Feb 2009],transcription,regulation of transcription, DNA-dependent,regulation of translation,posttranscriptional regulation of gene expression,regulation of cellular protein metabolic process,regulation of transcription,regulation of RNA metabolic process,
