研究背景 (Background)

This gene belongs to the ELO family. It is highly expressed in the adrenal gland and testis, and encodes a multi-pass membrane protein that is localized in the endoplasmic reticulum. This protein is involved in the elongation of long-chain polyunsaturated fatty acids. Mutations in this gene have been associated with spinocerebellar ataxia-38 (SCA38). Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Sep 2014],function:May be involved in the elongation of long-chain polyunsaturated fatty acids (PUFAs),similarity:Belongs to the ELO family.,tissue specificity:Highly expressed in the adrenal gland and testis. Weekly expressed in prostate, lung and brain.,

研究领域 (Research Area)

Biosynthesis of unsaturated fatty acids;

注意事项 (Note)
