研究背景 (Background)

This gene encodes a member of the forkhead box (FOX) family of transcription factors. FOX family members are monomeric, helix-turn-helix proteins with a core DNA-binding domain of approximately 110 aa. Many FOX transcription factors play roles

in determining cell fates during early development. This forkhead box protein lacks the C-terminal basic region found in many other FOX family members. It is located within the 11q23.3 region which is commonly deleted in neuroblastomas. [provided by RefSeq, Jul 2008],similarity:Contains 1 fork-head DNA-binding domain.,

For research use only.

图片 (Image Data)

Western blot analysis of lysates from HeLa cells, using FOXR1 Antibody. The lane on the right is blocked with the synthesized peptide.

Western Blot analysis of various cells using FoxR1 Polyclonal Antibody.

Immunohistochemical analysis of paraffin-embedded Human brain. Antibody was diluted at 1:100 (4°,overnight) . High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negative contrl (right) obtained from antibody was pre-absorbed by immunogen peptide.
