产品名称: Frizzled-2 Rabbit Polyclonal Antibody

产品货号: APRab11141

产品概述 (Summary)

产品名称 (Production Name) Frizzled-2 Rabbit Polyclonal Antibody

描述 (Description) Rabbit polyclonal Antibody

宿主 (Host) Rabbit

应用 (Application)WB,ICC/IF,ELISA种属反应性 (Reactivity)Human,Mouse,Rat

产品性能 (Performance)

偶联物 (Conjugation)Unconjugated修饰 (Modification)Unmodified

同种型 (Isotype) IgG

克隆 (Clonality) Polyclonal 形式 (Form) Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid 存放说明 (Storage)

freeze/thaw cycles.

Liquid in PBS containing 50% glycerol, 0.5% protective protein and 0.02% 储存溶液 (Buffer)

New type preservative N.

纯化方式 (Purification) Affinity purification

免疫原信息 (Immunogen)

基因名 (Gene Name) FZD2

别名 (Alternative Names) FZD2; Frizzled-2; Fz-2; hFz2; FzE2

基因 ID (Gene ID) 2535.0

Q14332.The antiserum was produced against synthesized peptide derived 蛋白ID (SwissProt ID)

from human FZD2. AA range:201-250

产品应用(Application)

稀释比 (Dilution Ratio) WB 1:500-1:2000,ICC/IF 1:200-1:1000,ELISA 1:20000-1:40000

蛋白分子量 (Molecular Weight) 55kDa

产品名称: Frizzled-2 Rabbit Polyclonal Antibody

产品货号: APRab11141

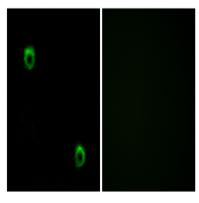

frizzled class receptor 2(FZD2) Homo sapiens This intronless gene is a member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the wingless type MMTV integration site family of signaling proteins. This gene encodes a protein that is coupled to the beta-catenin canonical signaling pathway. Competition between the wingless-type MMTV integration site family, member 3A and wingless-type MMTV integration site family, member 5A gene products for binding of this protein is thought to regulate the beta-catenin-dependent and independent pathways. [provided by RefSeq, Dec 2010],domain:Lys-Thr-X-X-X-Trp motif is involved in the activation of the Wnt/beta-catenin signaling pathway, domain: The FZ domain is involved in binding with Wnt ligands, function: Receptor for Wnt proteins. Most of frizzled receptors are coupled to the beta-catenin canonical signaling pathway, which leads to the activation of disheveled proteins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of Wnt target genes. A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway or if it can be integrated in the canonical pathway, as PKC seems to be required for Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem to involve interactions with G-proteins. May be involved in transduction and intercellular transmission of polarity information during tissue morphogenesis and/or in differentiated tissues, similarity: Belongs to the G-protein coupled receptor Fz/Smo family, similarity: Contains 1 FZ (frizzled) domain., tissue specificity: Widely expressed. In the adult, mainly found in heart, placenta, skeletal muscle, lung, kidney, pancreas, prostate, testis, ovary and colon. In the fetus, expressed in brain, lung and kidney. Low levels in fetal liver.,

研究领域 (Research Area)

WNT;WNT-T CELLMelanogenesis;Pathways in cancer;Colorectal cancer;Basal cell carcinoma;

图片 (Image Data)

Immunofluorescence analysis of MCF7 cells, using FZD2 Antibody. The picture on the right is blocked with the synthesized peptide.

注意事项 (Note)

For research use only.
