研究背景 (Background)

Cell surface heparan sulfate proteoglycans are composed of a membrane-associated protein core substituted with a variable number of heparan sulfate chains. Members of the glypican-related integral membrane proteoglycan family (GRIPS) contain a core protein anchored to the cytoplasmic membrane via a glycosyl phosphatidylinositol linkage. These proteins may play a role

in the control of cell division and growth regulation. [provided by RefSeq, Jul 2008],function:Cell surface proteoglycan that bears heparan sulfate.,similarity:Belongs to the glypican family.,tissue specificity:In adult, primarily expressed in the brain. Also detected in fetal brain, lung and liver.,
