研究背景 (Background)

The product of this gene belongs to a small family of adapter proteins that are known to interact with a number of receptor tyrosine kinases and signaling molecules. This gene encodes a growth factor receptor-binding protein that interacts with

epidermal growth factor receptor (EGFR) and ephrin receptors. The protein plays a role in the integrin signaling pathway and cell migration by binding with focal adhesion kinase (FAK). Several transcript variants encoding two different isoforms have been found for this gene. [provided by RefSeq, Jun 2011], alternative products: At least 2 isoforms are produced, function: Interacts with the cytoplasmic domain of the epidermal growth factor receptor which is then inhibited. The interaction is mediated by the SH2 domain. Also binds to ERBB2., PTM: Phosphorylated on tyrosine residues., similarity: Belongs to the GRB7/10/14 family., similarity: Contains 1 PH domain., similarity: Contains 1 Ras-associating domain., similarity: Contains 1 SH2 domain., subunit: Interacts with RND1.,
