which heterodimerizes with type II keratins to form hair and nails. The type I hair keratins are clustered in a region of chromosome 17q12-q21 and have the same direction of transcription. [provided by RefSeq, Jul 2008],miscellaneous:There are two types of hair/microfibrillar keratin, I (acidic) and II (neutral to basic),similarity:Belongs to the intermediate filament family,tissue specificity:Restricted to the hair cuticle.,
