研究背景 (Background)

This gene encodes a member of the Ras-association domain family (RASSF). Members of this family form the core of a highly conserved tumor suppressor network, the Salvador-Warts-Hippo (SWH) pathway. The protein encoded by this gene is a Ras

effector protein that induces apoptosis. A genomic region containing this gene has been linked to susceptibility to viral bronchiolitis. Alternative splicing results in multiple transcript variants and protein isoforms. [provided by RefSeq, Jul 2012],function:May act as a Ras effector protein.,sequence caution:Translated as Gln.,similarity:Contains 1 Ras-associating domain.,similarity:Contains 1 SARAH domain.,
