研究背景 (Background)

This gene was identified on the basis of its stimulation by c-Myc protein. The latter is a transcription factor that participates in

the regulation of cell proliferation, differentiation, and apoptosis. The exact function of this gene is not known but studies in rat suggest a role in cellular proliferation and c-Myc-mediated transformation. Two alternative transcripts encoding different proteins have been described. [provided by RefSeq, Jul 2008],caution:The sequence shown here is derived from an Ensembl automatic analysis pipeline and should be considered as preliminary data.,function:May play a role during cellular proliferation and c-Myc-mediated transformation.,tissue specificity:Expression is elevated in lymphoid cells that overexpress c-Myc.,
