研究背景 (Background)

This gene belongs to the family defined by the mouse resistin-like genes. The characteristic feature of this family is the C-

terminal stretch of 10 cys residues with identical spacing. The mouse homolog of this protein is secreted by adipocytes, and may be the hormone potentially linking obesity to type II diabetes. Alternatively spliced transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Jul 2010],function:Hormone that seems to suppress insulin ability to stimulate glucose uptake into adipose cells. Potentially links obesity to diabetes.,similarity:Belongs to the resistin/FIZZ family.,subunit:Homodimer; disulfide-linked.,tissue specificity:Expressed only in fatty tissues.,

研究领域 (Research Area)

Signal Transduction; Metabolism; Energy Metabolism; Cardiovascular; Atherosclerosis; Diabetes associated; Pathways and Processes; Metabolic signaling pathways; Energy transfer pathways; Diabetes; Heart disease; Metabolic disorders
