研究背景 (Background)

The protein encoded by this gene is a G protein-coupled receptor that interacts with the patched protein, a receptor for hedgehog proteins. The encoded protein transduces signals to other proteins after activation by a hedgehog protein/patched

protein complex. [provided by RefSeq, Jul 2010],disease:Defects in SMO are involved in basal cell carcinoma (BCC),,function:G protein-coupled receptor that probably associates with the patched protein (PTCH) to transduce the hedgehog's proteins signal. Binding of sonic hedgehog (SHH) to its receptor patched is thought to prevent normal inhibition by patched of smoothened (SMO),,similarity:Belongs to the G-protein coupled receptor Fz/Smo family,,similarity:Contains 1 FZ (frizzled) domain.,
