免疫原(Immunogen)	A synthetic peptide of human TATA binding protein TBP

研究背景 (Background)

As one of the few proteins in the preinitiation complex that binds DNA in a sequence-specific manner, it helps position RNA polymerase II over the transcription start site of the gene. However, it is estimated that only 10-20% of human promoters have

TATA boxes. Therefore, TBP is probably not the only protein involved in positioning RNA polymerase II. This protein is not suitable for samples where the nuclear envelope has been removed.

研究领域 (Research Area)

Epigenetics and Nuclear Signaling

注意事项 (Note)

For research use only.
