研究背景 (Background)

Transcription activator which binds specifically to the MEF2 element present in the regulatory regions of many muscle-specific genes. Controls cardiac morphogenesis and myogenesis, and is also involved in vascular development. Plays an essential role in hippocampal-dependent learning and memory by suppressing the number of excitatory synapses and thus regulating basal

and evoked synaptic transmission. Crucial for normal neuronal development, distribution, and electrical activity in the neocortex.

研究领域 (Research Area)

Signal Transduction

注意事项 (Note)

For research use only.
