研究背景 (Background)

Plays a role in cytotoxic granule exocytosis in lymphocytes. Required for both granule maturation and granule docking and priming at the immunologic synapse. Regulates assembly of recycling and late endosomal structures, leading to the formation of an endosomal exocytic compartment that fuses with perforin-containing granules at the immunologic synapse and licences

them for exocytosis. Regulates Ca^{2+} -dependent secretory lysosome exocytosis in mast cells.

研究领域 (Research Area)

Immunology
