研究背景 (Background)

Plays a major role in polyamine metabolism and is important for the salvage of both adenine and methionine. Catalyzes the reversible phosphorylation of S-methyl-5'- thioadenosine (MTA) to adenine and 5-methylthioribose-1-phosphate. Involved in the breakdown of MTA, a major by-product of polyamine biosynthesis. Responsible for the first step in the methionine salvage

pathway after MTA has been generated from S-adenosylmethionine. Has broad substrate specificity with 6-aminopurine nucleosides as preferred substrates.

研究领域 (Research Area)

Signal Transduction

注意事项 (Note)

For research use only.
