研究背景 (Background)

Cell localization: Cytoplasm, Nucleus. Ribosomal protein S6 kinase A1 (RPS6KA1) Homo sapiens This gene encodes a member of the RSK (ribosomal S6 kinase) family of serine/threonine kinases. This kinase contains 2 nonidentical kinase catalytic domains and phosphorylates various substrates, including members of the mitogen-activated kinase (MAPK) signalling pathway. The activity of this protein has been implicated in controlling cell growth and differentiation. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. Rat womb whole cell lysates were separated by 10% SDS-PAGE, and the membrane was blotted with primary antibody (1:1000). The HRP-conjugated Goat anti-Rabbit IgG (H + L) antibody was used to detect the antibody.
