研究背景 (Background)

Cell localization:Nucleus..This gene encodes a protein containing an RNA-binding motif in the N-terminus and four SRGY (serine, arginine, glycine, tyrosine) boxes in the C-terminus. This protein is thought to function as a splicing regulator during

spermatogenesis. Multiple closely related paralogs of this gene are found in a gene cluster in the AZFb azoospermia factor region of chromosome Y. Most of these related copies are thought to be pseudogenes, though several likely encode functional proteins. [provided by RefSeq, Mar 2016]

For research use only.

图片 (Image Data)

Western Blot analysis of COLO 320 whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-RBMY1A1 rabbit mAb. The HRP-conjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody.
