研究背景 (Background)

Cell localization:Membrane.catenin delta 1(CTNND1) Homo sapiens This gene encodes a member of the Armadillo protein

family, which function in adhesion between cells and signal transduction. Multiple translation initiation codons and alternative splicing result in many different isoforms being translated. Not all of the full-length natures of the described transcript variants have been determined. Read-through transcription also exists between this gene and the neighboring upstream thioredoxin-related transmembrane protein 2 (TMX2) gene. [provided by RefSeq, Dec 2010],

注意事项 (Note)

For research use only.

图片 (Image Data)

Western blot analysis of lysates from 3T3-L1 cells, using Catenin δ -1 Rabbit mAb. The HRP-conjugated Goat anti-Rabbit IgG antibody was used to detect the antibody.
