研究背景 (Background)

Cell localization:Cytoplasm.The protein encoded by this gene is a member of the Janus kinase (JAK) family of tyrosine

kinases involved in cytokine receptor-mediated intracellular signal transduction. It is predominantly expressed in immune cells and transduces a signal in response to its activation via tyrosine phosphorylation by interleukin receptors. Mutations in this gene are associated with autosomal SCID (severe combined immunodeficiency disease). [provided by RefSeq, Jul 2008],
