背景 (Background)

分子别名 (Alternative Names)	Serotransferrin; Transferrin; Beta-1 metal-binding globulin; Siderophilin; TF
背景介绍 (References)	Serotransferrin belongs to transferrin family, and contains 2 transferrin-like domains. The protein is a secreted protein, and expressed by the liver and secreted in plasma. Transferrins are iron binding transport proteins which can bind two Fe ³⁺ ions in association with the binding of an anion. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.
